

## Graduate field of study, by sex

*Changing opportunities within the job market affect the fields in which males and females choose to earn a graduate degree. The female field concentration ratio shows how much the fields studied by females differ from those studied by males. A ratio above 1.0 indicates that females are more likely than males to major in a field, and a ratio below 1.0 indicates the opposite pattern. Changes in the ratio show whether differences in the field preferences of males and females are narrowing or widening, and also may indicate changes in females' occupations and earning potential compared to those of males.*

- Overall, in 1994, substantially more females than males earned graduate degrees in education and health professions. A higher proportion of males than females earned graduate degrees in natural sciences, computer sciences and engineering, and business management.
- Between 1970 and 1986, the difference in the proportion of men and women earning master's degrees in computer sciences and engineering narrowed each year. Since 1986, it has remained stable with males being five times more likely than females to earn a master's degree in computer sciences and engineering.
- Although differences in the proportions of males and females earning master's degrees in business management narrowed between 1971 and the mid-1980s when the trend leveled off, males were still twice as likely as females to earn a master's degree in business management in 1994.
- From 1971 to 1983, a higher percentage of males than females earned master's degrees in the social and behavioral sciences. From 1984 to 1994, a higher percentage of females than males earned master's degrees in this field. At the doctorate level, females have been consistently more likely to earn a degree in the social and behavioral sciences since 1971 (see supplemental table 28-1).

### Female field concentration ratio<sup>1</sup> of graduate degrees conferred, by field of study and degree level: Selected academic years ending 1971–94

Field of study and degree level	1971	1974	1977	1980	1983	1986	1989	1992	1993	1994

<sup>1</sup> Principally composed of public administration at the master's degree level and agriculture and natural resources at the doctor's degree level. See the glossary for a full definition of "other technical/professional" fields.

<sup>2</sup> The index of dissimilarity is calculated as the sum of the absolute difference between the proportions of females and males earning degrees in each of the fields, divided by two. For this analysis, it was calculated using the 11 detailed categories shown above. (For example, the "life sciences," "physical sciences," and "mathematics" categories were used in this analysis, but the "natural sciences" category was not). Here, the index of dissimilarity represents the percentage, by field, one sex would need to vary to reach the field distribution of the other sex.

NOTE: Details may not add to totals due to rounding. Includes degrees conferred to U.S. and non-U.S. citizens. See the supplemental note to *Indicator 27* for a description of fields of study.

<sup>1</sup> Principally composed of public administration at the master's degree level and agriculture and natural resources at the doctor's degree level. See the glossary for a full definition of "other technical/professional" fields.

<sup>2</sup> The index of dissimilarity is calculated as the sum of the absolute difference between the proportions of females and males earning degrees in each of the fields, divided by two. For this analysis, it was calculated using the 11 detailed categories shown above.

(For example, the "life sciences," "physical sciences," and "mathematics" categories were used in this analysis, but the "natural sciences" category was not). Here, the index of dissimilarity represents the percentage, by field, one sex would need to vary to reach the field distribution of the other sex.

NOTE: Details may not add to totals due to rounding. Includes degrees conferred to U.S. and non-U.S. citizens. See the supplemental note to Indicator 27 for a description of fields of study.
